Open Burning Memo

Arlington is 1 of 22 communities in which "open burning" is not allowed at all due to the density of population and the close proximity of buildings within their borders.

The Department of Environmental Protection (MassDEP) and the Arlington Fire Department limit open burning for public health and safety reasons. While "open burning" is not explicitly defined in the State's regulations, it generally covers leaves, wood, yard debris, trash, tires, and other combustible materials which generate significant smoke. Open burning pollutes the air and can make it difficult for people with respiratory problems to breathe. Further, when the air is stagnant, open burning can pose smoke and odor nuisances to nearby residents, particularly in densely populated areas. Open burning can also pose a safety risk when it is not adequately controlled.

The limits on open burning do not apply to outdoor cooking, or self-contained apparatus where a flame is not exposed. Outdoor cooking appliances are defined as grills powered by LP, charcoal, or electricity. Chimeneas, outdoor fire pits, open outdoor fireplaces, and similar appliances designed for the primary purpose of heating and burning are typically prohibited, in part because they often do not burn clean materials, and further because they may present fire hazards in densely populated areas. The primary purpose of these appliances is not cooking, therefore they are not to be used, and fire officers and firefighters will extinguish fires created by the appliance.

However, listed enclosed heating apparatus, such as commercial heating lamps or listed enclosed LP and gas-fired fire places, may be permissible so long as they neither pose significant fire risks nor emit significant smoke and meet the following conditions::

1. The owner/operator complies with manufacturer guidelines and directions;
2. The owner/operator maintains a fire extinguisher with a current inspection tag in the nearby vicinity; and
3. All heating units kept a safe distance from combustibles, especially structures.

If residents have questions about open burning fire officers should advise them to refer to the below references. Personnel with questions should contact the Fire Prevention Office.
